

Team 4: Interface Evaluation

Title: BulletinBoard

Team: Hadeel Farhan at farhan.h@northeastern.edu, Nivashini Suresh at suresh.ni@northeastern.edu, and Abby Carr at carr.ab@northeastern.edu

Website: <http://www.developinginteractions.com>

Prototype: <https://BulletinBoard.abbyccarr.repl.co>

Start-up Instructions:

Click the link above to get to the interface on a laptop or a computer. The website should be ready to use.

Briefing:

Bulletin Board is a website that allows for people to connect with their neighbors. You can post notes on electronic bulletin boards and either leave information to be contacted or just leave information for your neighbors to see. Depending on the type of board, you can ask questions or you can find out about neighborhood events you might be interested in. You can also upload images and advertisements for all your neighbors to see. The above is a high-fidelity prototype in the form of a website without any backend. Therefore, refreshing the page will lose all the changes you may have made to the page. The link will start out at the home page with a welcome board. You can navigate and interact with the prototype like a regular website.

Scenario Tasks:

- Advertise your bake sale poster on the bulletin board!
- Find a neighborhood event you can get involved in and get the calendar link(just goes to www.google.com/calendar).
- Ask a question to everyone: "When does the trash go out?"
- Delete the welcome post on the Welcome board!
